The invention relates to isolated polynucleotides (ABA90876-ABA90968 and ABA90980) and encoded proteins (ABB55698-ABB55800), especially CABA90980) and encoded proteins (ABB55698 and SEQ ID No 19 (ABA90885) and SEQ ID No 19 (ABA90885) and SEQ ID No 19 (ABA90885) and SEQ ID No 19 (ABB55707) contained in clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 clones bd306-7 and yb8-1 clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 closes in number 98599. The polynucleotides and encoded polypeptides have cytostatic, anti-inflammatory, immunomodulator, vulnerary, currentlammatory activity and acting as cytokine modulators, haematopoiesis regulators, tissue growth modulators and/or cadherin and anti-inflammatory activity and acting as cytokine modulators, haematopoiesis regulators, tissue growth modulators and/or cadherin cupraples, particularly for preventing, treating or ameliorating any of the following diseases: immune deficiency and disorders; e.g. bacterial corrections, autoimmune disorders, cancer, systemic lupus crythematosus or graft-versus-host disease; myeloid or lymphoid cell deficiencies; wound, burns, incisions and ulcers, osteoporosis or correctivity; inflammatory shock, sepsis correspectivity; endocoxin lateral sclerosis or Shy Drager syndrome; disease, amyotrophic lateral sclerosis or Shy Drager syndrome; contraining, cardiac inflammatory response syndrome, ischaemia-reperfusion or systemic inflammatory response syndrome, ischaemia-reperfusion or stroke; inflammatory bowel disease or consystemic inflammatory response syndrome, ischaemia-reperfusion con the construction or stroke; inflammatory bowel disease or consistence or tumours or cancers, pemphigus vulgaris or pemphigus or premphigus or systemic pages.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     225

The expression of RNA-associated proteins is closely associated with reproductive tissues, nervous tissues, call proliferation including cancer, inflammation and immune responses, and so they may be used for diagnosis, treatment or prevention of cell proliferative, and disorders which may be treated include actinic keratosis, and hardocasters of treated include actinic keratosis, attentosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease, myelofibrosis, paroxysomal nocturnal hemoglobinutia, polycythermia vera, psoriassis, primary thrombocythemia and cancers, and trauma.
                                                                                                                                                                                                                                                                                   polypeptides and polynucleotides, useful for preventing and uting a disorder associated with increased or decreased expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          237 GlnArgArgGlyPheLeuCysAsnGlnAlaProHisLysHisGlyPheLeuGluGlyArg

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The human RNA editing enzyme (REE) is used in a pharmaceutical carrier for the treatment of cancer, viral diseases and circulatory system disorders. The enzyme is used in vivo for the correct processing of RNA transcripts of genes e.g. change of a codon in apolipoprotein B (apoB) RNA to give a 100 and 48 kDa product transcribed from the same enem. Certain disorders have been linked to incorrect RNA editing, e.g. failure of apo B editing leads to excessive apoB 100 production and hypercholesterolaemia. Other disorders thought to be linked to incorrect RNA processing include aberrant alpha-galactosidase processing in Fabry's disease and neurofibromatchosis type I. The enzyme can be produced recombinantly to treat related disorders. It can also be used to raise antibodies for immuno-based detection of REE expression levels

This sequence represents the human RNA editing enzyme REE-2. CDNA encoding REE-2 was initially isolated in a prostate tumour CDNA library, with the CDNA encoding the present sequence representing a consensus.

REE-2 has chemical and structural homology with the human apoB mRNA cditing protein HEPR (28% identity), the rat HEPR homologue REPR (30% identity), and a portion of the mRNA editing enzyme phorbolin I (43% identity), and a portion of the mRNA editing enzyme phorbolin I (43% identity), and a portion of which were derived from tumours, neuronal tissues, immune system cells or synovial tissue from arthritis patients. Therefore thought to be associated with the development of REE-2 is therefore thought to be associated with the development of hypercholesterolaemia), viral infections and neurological diseases (e.g., neurofibromatosis). REE-2 or its nucleic acids may be used in the diagnosis, treatment and prevention of such diseases via the modulation of transcript editing, which in turn has effects on the encoded protein relates to methods of detecting nucleic acids encoding human REE-2 in a bloggical sample.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous of the invention may be used to treat diseases of the peripheral nervous containing a polypeptide or polynuclectide of the invention may be used to treat diseases, peripheral nervous contains and include in asserting and central nervous system diseases, such as a localised neuropathies and central nervous system disease, such as a lateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and contains. The sequence data for this patent did not form part of the printed
                                                                                                                  nootropic; immunosuppressant; cytostatic; gene therapy; cancer; sral nervous system; neuropathy; central nervous system; CNS;

The present invention relates to the isolation of novel human enzyme polypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, disquencies, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. cancer), e.g. arthritis), neurological disorders (e.g. Alzheimer's disease),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 11; SEQ ID No 1546; 1180pp; English.

The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen

```
The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of aisorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. athnitis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. themophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                432
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        145 CTTCGCAAT------AAGAACGGCTGCCACGTGGAATTGCTCTTCCTCCGCTAC 192

The present invention relates to the isolation of novel human enzyme polypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), lood related disorders (e.g. thempolicity disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                 Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                              Claim 11; SEQ ID No 1795; 1180pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

apolipoprotein B mRNA editing enzyme, catalytic chain 1 (EC 3.5.4.-) - rat Cispecies: Rattus norvegicus (Norway rat)
C; Species: Rattus norvegicus (Norway rat)
C; Date: 02-Aug-1996 #sequence_revision 02-Aug-1996 #text_change 18-Aug-2000
C; Accession: 159577
R; Teng, B.; Burant, C.F.; Davidson, N.O.
Science 260, 1816-1819, 1993
A; Title: Molecular cloning of an apolipoprotein B messenger RNA editing protein. A; Reference number: 159577; MUID: 93289362; PMID: 8511591
A; Accession: 159577
A; Accession: 159577
A; Molecule type: mRNA
A; Molecule type: mRNA
A; Molecule type: mRNA
A; Molecule type: mRNA
A; Residues: 1-29 cRES
A; Cross references: GB:L07114; NID: 9467808; PIDN: AAA17394.1; PID: 9347165

Submitted (OCT-2001) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: ESSENTIAL COMPONENT OF THE NUCLEAR PORE COMPLEX.

THE N-TERMINAL IS PROBABLY INVOLVED IN NUCLEOCYTOPLASMIC
TRANSPORT: THE C-TERMINAL IS PROBABLY INVOLVED IN PROTEIN-PROTEIN
INTERACTION VIA COLLED-COLL FORMATION AND MAY FUNCTION IN
ANCHORAGE OF P62 TO THE PORE COMPLEX.

-!- SUBCELLULAR LOCATION: CENTRAL REGION OF THE NUCLEAR PORE, WITHIN
THE TRANSPORTER. DURING MITOTIC CELL DIVISION, IT ASSOCIATES WITH
THE POLES OF THE MITOTIC SPINDLE.

-!- DOMAIN: CONTAINS F-X-F-G REPEATS.

-!- DOMAIN: CONTAINS F-X-F-G REPEATS.

-!- CHAIN SITES PREDICTED FOR THE ENTIRE PROTEIN, AMONGST WHICH ONLY

Greenhalf W., Lee J., Chaudhuri B.;
A selection system for human apoptosis inhibitors using yeast.";
Yeast 15:1307-1321(1999).
I- FUNCTION: Represses hepatitis B virus (HBV) core promoter activity and transcription of HBV genes and production of HBV virions.
Binds to the consensus DNA sequence: 5'-GA[GT]AN[GG][AG]CC-3'.
Might protect cells from apoptosis. Might be involved in pre-mRNA splicing (By similarity).
I- SUBCELLULAR LOCATION: Nuclear with a speckled distribution.
I- ALTERNATIVE PRODUCTS: 10 isoforms; A, B, C, D, E, F (shown here), G, H, I and J; may be produced by alternative splicing.
I- TISSUE SPECIFICITY: Widely expressed, with the higher expression

2 x 11 AA TANDEM REPATS OF P-P-L-P-P-E-E-
P-P-[TME]-[MTG].
7 x 7 AA REPEATS OF P-S-R-R-S-R-[TS].
2-1.
       sequence: 5'-GA[GT]AN[GG][AG]CC-3'. Might protect cells from apoptosis. Might be involved in pre-mRNA splicing (By similarity). BUBCELLULAR LOCATION: Nuclear (By similarity). ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.
TISSUE SPECIFICITY: Widely expressed.
DOMAIN: Contains 8 types of repeats which are distributed in 3
                                                                               -!- SIMILARITY: CONTAINS 1 G-PATCH DOMAIN.
-!- SIMILARITY: CONTAINS 1 DRBM (DOUBLE-STRANDED RNA-BINDING) DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                               13 x 10 AA TANDEM REPEATS OF L-A-[ST]-
